NEVERLEAK

Ends All Tire Troubles

A four ounce tube of NEVERLEAK TIRE FLUID injected into each of your tires will save you all of those aggravating, expensive tire troubles that are eternally catching you just when you want your wheel the most.

It's a positive insurance against tire troubles. With your tires treated with NEVERLEAK you can ride over the roughest roads with never a stop for repairs. You can always depend upon getting to your destination without any embarrassing delays. You can enjoy the pleasure and convenience of wheeling more than ever before—absolutely free from worry and unnecessary expense.

Inject NEVERLEAK Into Your Tires NOW—Today

The moment a tire containing NEVERLEAK is punctured, the air pressure within forces the fluid into the opening and when it strikes the outer air it immediately thickens and closes the vent at once. The tire does not become flattened in the least—you would never know that you had punctured your tire. The repair is made automatically and is permanent. It does away entirely with all plugging and patching except in the most severe accidents. One injection of NEVERLEAK will last as long as your tires last.

NEVERLEAK

Makes Tires Wear Longer

You will get double the service out of your tires by injecting Neverleak Tire Fluid into them. It will make them wear for months after you would otherwise have to buy new ones—never giving you any trouble—never costing you a cent for repairs.

Injecting NEVERLEAK into your tires is the most practical economy. It will save you all expensive repair bills and the cost of several new sets of tires. It will greatly reduce the expense of keeping your wheel.

The Sooner You Inject NEVERLEAK Into Your Tires the Better

It's a preservative of both the fabric and rubber of which bicycle tires are made and keeps them in the best of condition. It prevents all trouble on account of your tires getting porous, will stop all thread leaks or those caused from previous poor or defective repairs, and will instantly heal all punctures within the bounds of reason.

Make the test and satisfy yourself. A 25c tube of NEVERLEAK is enough to treat one tire. You can easily inject it yourself, or your repair-man will do it for you at a small additional charge. It is used and sold by tire repairers everywhere.

NEVERLEAK

Tire Fluid

NEVERLEAK TIRE FLUID is the only compound which stood the test of twenty years use. It's the one standard preparation used by riders everywhere

It is injected through the valve stem and flows around inside of the tire, thoroughly coating the surface, and remaining in liquid form ready to plug any vent or puncture the instant made.

It will not interfere with the working of a valve, nor impair the resiliency of the tire.

It is put up in tubes with the thread end exactly the right size to screw into the valve stem.
